Philippe Ailleris, astronom amater, pokrenuo je na privatnoj bazi projekt Unidentified Aerospace Phenomena (UAP) Ā koji je u okviru MGA2009 (detalji na <http://www.astronomy2009.org/news/updates/530/>).

Svrha je da se na globalnoj razini opažaju pojave u atmosferi koji nemaju oēitih objaĀnjenja. U tu svrhu pokrenute su web-stranice (<http://www.uapreporting.org/>) koje astronomima omoguēuju objaviti takove pojave.

Ā

In addition, the website will also give information on common nocturnal and daytime misidentifications, such as sightings of satellites, weather balloons, rockets and natural phenomena such as meteors, planets, ball lightning, sprites and mirages. There will also be links to relevant websites where people can further check charts and details. This will allow people to double check their sighting against explainable causes, hoping that the website will be a useful tool for the astronomy community to redirect enquiries from the general public and to help engage with the public in discussions about the science behind what is seen in the sky.
